Project Name	Smart Waste Management System for Metropolitan Cities

Question: Build a python code, Assume you get temperature and humidity values (generated with a random function to a variable) and write a condition to detect an alarm in case of high temperature continuously.

CODE:

```
import random

from time import sleep

while True:

    sleep(5)

    temperature = random.randrange(0, 200, 3)

    print("\nCurrent Temperature =", temperature, end="°C\n")

    humidity = random.randrange(0, 100, 6)

    print("Current Humidity    =", humidity, end="%\n\n")

    if temperature >= 38:

        print("Temperature : High - Alarm ON")

    if humidity >= 75:

        print("Humidity    :High - Alarm ON")
```

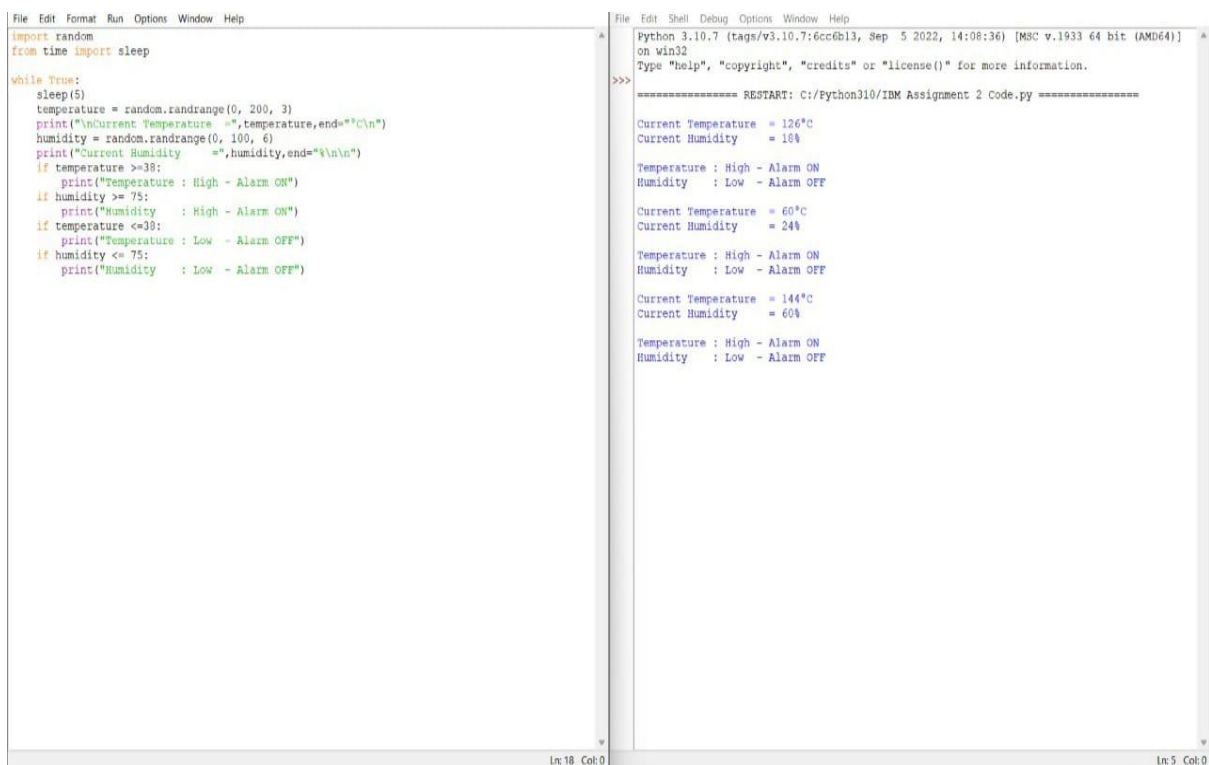

if temperature <=38:

print("Temperature : Low - Alarm OFF")

if humidity <= 75:

print("Humidity : Low - Alarm OFF")

SCREENSHOT:

The image shows two side-by-side screenshots of a Python IDE. The left window displays the source code for a temperature and humidity monitoring script. The right window shows the output of the script, which includes a restart message and several data points for temperature and humidity with their corresponding alarm status.

```
File Edit Format Run Options Window Help
import random
from time import sleep

while True:
    sleep(5)
    temperature = random.randrange(0, 200, 3)
    print("\nCurrent Temperature : ",temperature,end="°C\n")
    humidity = random.randrange(0, 100, 6)
    print("Current Humidity : ",humidity,end="%\n\n")
    if temperature >=38:
        print("Temperature : High - Alarm ON")
    if humidity >= 75:
        print("Humidity : High - Alarm ON")
    if temperature <=38:
        print("Temperature : Low - Alarm OFF")
    if humidity <= 75:
        print("Humidity : Low - Alarm OFF")
```
